Welcome to our 2025 di'Vine Landscape catalogue.

The di'Vine landscape range from Arcus Wire Group is an adaptable stainless steel system designed to offer flexibility in creating modern gardens and architectural features. Suitable for lattice or straight-line formations, the system can be easily applied to various structures such as solid walls (brick, concrete, or tilt slab) and timber frameworks.

Designed for residential settings, the di'Vine landscape range is easy to install, requiring basic hand tools only.

Combining aesthetic appeal with functionality, the di'Vine landscape range is ideal for all landscape projects.

BENEFITS

Durability - Crafted from high-quality, long-lasting AISI 316 Stainless Steel components, ensuring longevity and a polished aesthetic for any landscape.

Design Flexibility - The system allows for creative freedom with the ability to form numerous patterns using minimal components, constrained only by imagination.

Structural Integrity - Despite being lightweight, the system is robust and typically does not require additional bracing or support for the backing structure.

Versatile Application - Suitable for public, commercial, and residential environments.

Eco-friendly - Constructed from 95% recyclable stainless steel, it encourages the natural growth of vines, climbers, and scrambling plants without restriction.

Air Circulation - A 100mm wall offset facilitates airflow behind the plants, promoting healthy plant growth.

Simple Installation - Designed for ease, it only requires basic hand tools, making installation straightforward and hassle-free.

APPLICATIONS

- Ideal for residential settings.
- Can be used on fences, feature walls, or pillars.
- Perfect for tilt-slab walls in industrial or modern architectural settings.
- Artistic designs for creating custom patterns in public or private spaces.
- Effective in anti-graffiti applications for public or private areas.
